

## Highly absorptive wound dressings

### Introduction

For wounds producing large amounts of wound exudates, frequently replacing of wound dressings will be required since the completely dried up of exudate always makes the dressing become adherent to the wound bed and will cause second damage when replacing the dressing.

To manage the wound exudation, Far Eastern New Century Corporation (FENC) has developed the following highly absorptive wound dressings which can absorb the wound exudates massively.

Wound Exudation Dressing

"Savderm®" Foam Dressing
